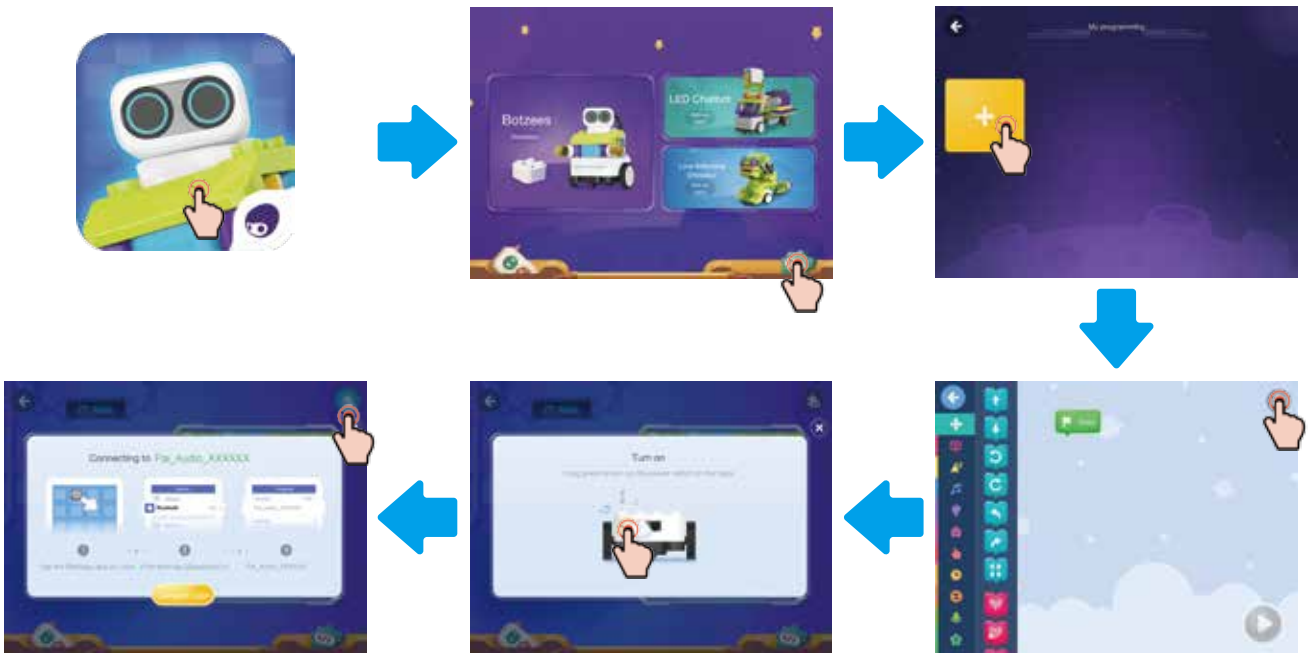
Prepare your device



What to learn

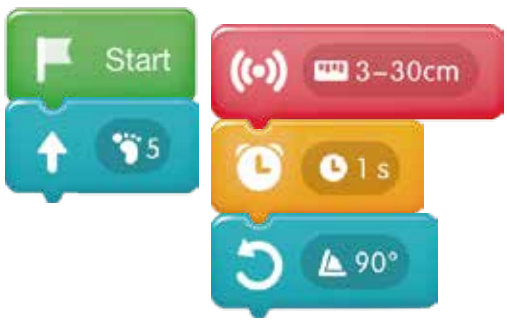
1. Learn to use delay command and distance sensor command .

2. Learn to use movement command , delay command and distance sensor command to program.

Let’s get it started!

1. Make the baggage move 5 steps forward.

2. The baggage will stop instantly when meeting an obstacle and turn automatically 1 second later.



3. Adjust the parameter to make the baggage stop longer when meeting an obstacle, and then turn.

Drag the scroll bar to the point of “5s”.

Try these commands!

Have a try

1. Building task

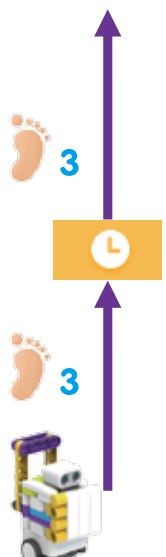
Try to build a side-opened movable baggage!

Have a try

2. Programming task

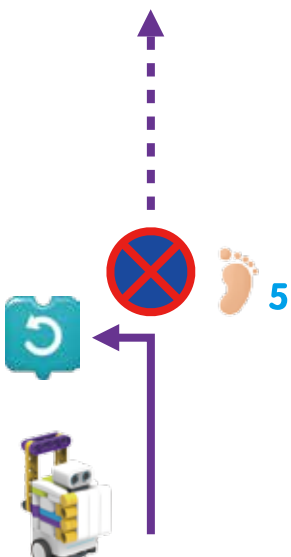
Task 1

Make the baggage move forward, then stop for a while and keep forward.



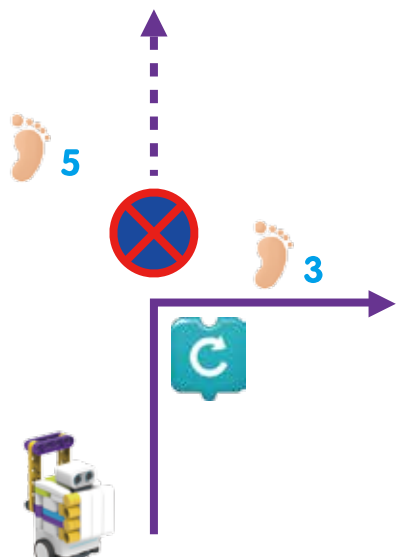
Task 2

Make the baggage turn left when meeting an obstacle during its moving forward.



Task 3

Make the baggage turn right when meeting an obstacle during its moving forward, then keep forward.



For reference
